Jordan Jordan, Senior Consultant

SAFE + SUSTAINABLE SITE CERTIFICATION

Developed in partnership with regional government, with input from state and local agencies, industry professionals, and respected advocacy groups, the Safe + Sustainable program guides building teams toward:

Containment of lead and other toxics and site hazards

Reduction of building material waste

Reduction and mitigation of local environmental impacts

Improved community relations and incentives for investment in community benefits

Managing Toxics

The S+S program requires clients to:

- Submit detailed job site safety and hazardous materials management plans, and have a designated Safety Manager onsite at all times

- Train all workers in recognition of suspect asbestos containing materials, and employ "lock out / tag out" practices

- Test painted materials for lead prior to removal

- Test soils for elevated lead concentrations and abate as needed

- Limit diesel particulate dispersal

Communication is Key

S+S communication tools include:

- Informational door hangers distributed to neighboring properties

- Clearly displayed site signage

- Program website sharing important health and safety resources

- Optional presentations to neighborhood associations
